## GENERAL INFORMATION MOTORCYCLE IDENTIFICATION

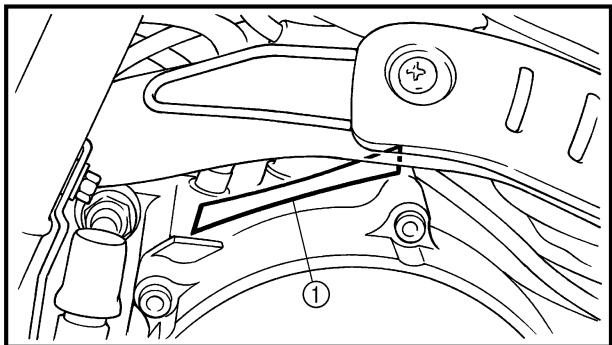

### VEHICLE IDENTIFICATION NUMBER

The vehicle identification number ① is stamped into the right side of the steering head.

1

#### NOTE: \_\_\_\_\_

The vehicle identification number is used to identify your motorcycle and may be used to register your motorcycle with the licensing authority in your state.

### ENGINE SERIAL NUMBER

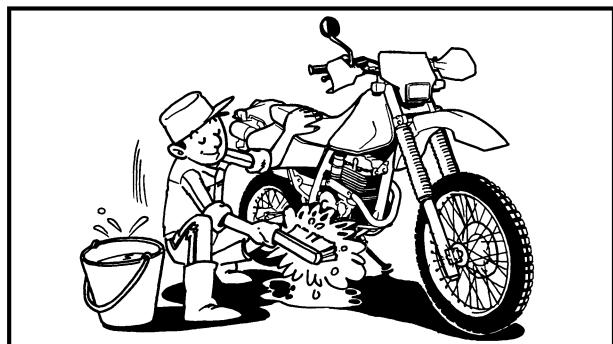

The engine serial number ① is stamped into the elevated part of the right rear section of the engine.

#### NOTE: \_\_\_\_\_

- The first three digits of these numbers are for model identifications; the remaining digits are the unit production number.
- Designs and specifications are subject to change without notice.

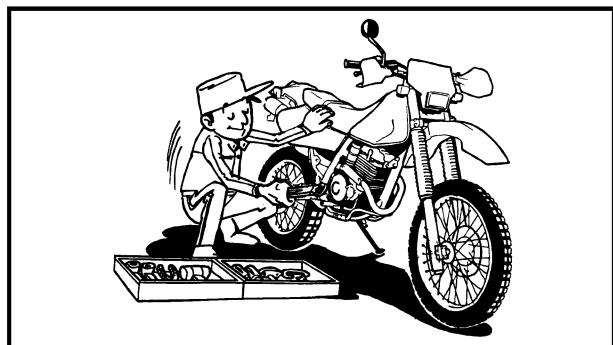

1

## IMPORTANT INFORMATION

### PREPARATION FOR REMOVAL AND DISASSEMBLY

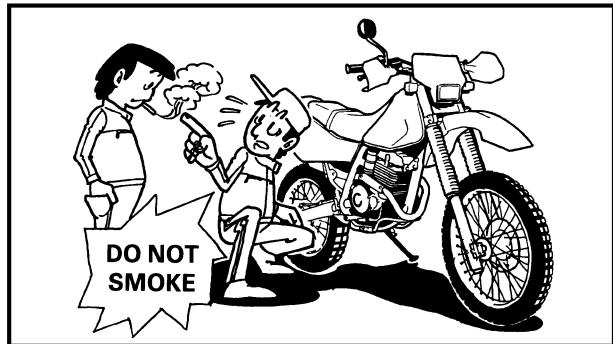

1. Remove all dirt, mud, dust, and foreign material before removing and disassembling.

2. Use proper tools and cleaning equipment. Refer to "SPECIAL TOOLS".

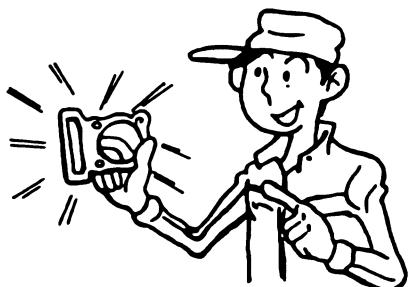

3. When disassembling the motorcycle keep mated parts together. This includes gears, cylinder, piston and other mated parts that have been "mated" through normal wear. Mated parts must be reused as an assembly or replaced.

4. During the motorcycle disassembly, clean all parts and place them in trays in the order of disassembly. This will speed up assembly time and help assure that all parts are correctly reinstalled.

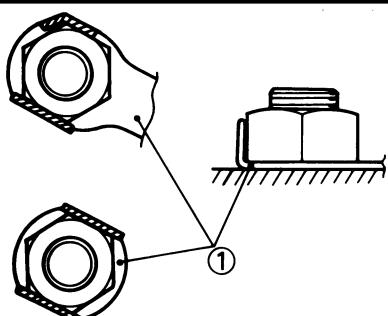

5. Keep away from fire.

300-016

**ALL REPLACEMENT PARTS**

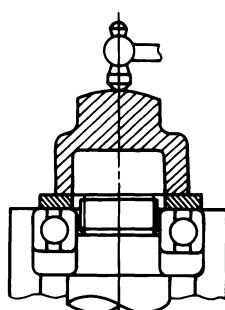

1. Use only genuine Yamaha parts for all replacements. Use oil and/or grease recommended by Yamaha for assembly and adjustment. Other brands may be similar in function and appearance, but inferior in quality.

300-000

**GASKETS, OIL SEALS, AND O-RINGS**

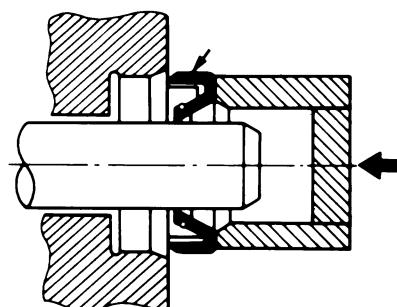

1. All gaskets, seals and O-rings should be replaced when an engine is overhauled. All gasket surfaces oil seal lips and O-rings must be cleaned.
2. Properly oil all mating parts and bearings during reassembly. Apply grease to the oil seal lips.

300-002

**LOCK WASHERS/PLATES AND COTTER PINS**

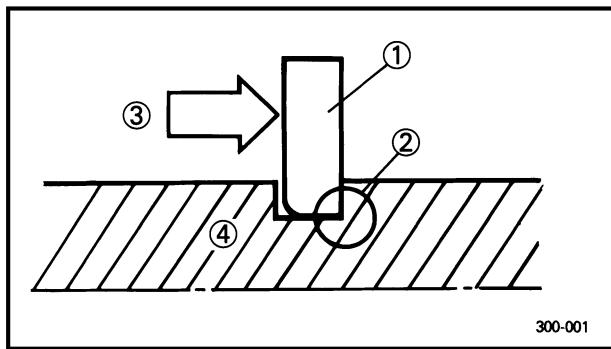

1. All lock washers/plates (1) and cotter pins must be replaced when they are removed. Lock tab(s) should be bent along the bolt or nut flat(s) after the bolt or nut has been properly tightened.

300-003

**CAUTION:**

**Do not use compressed air to spin the bearings dry. This causes damage to the bearing surfaces.**

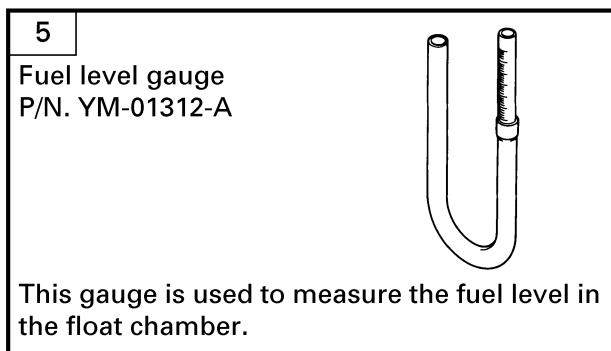

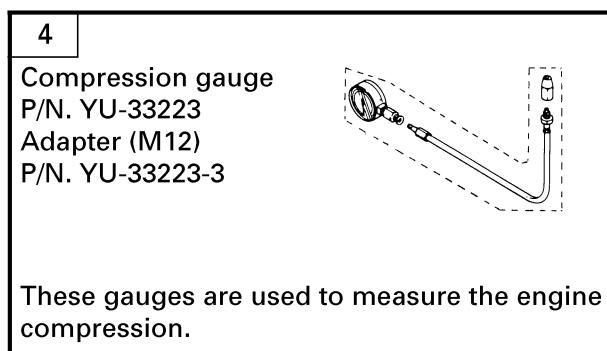

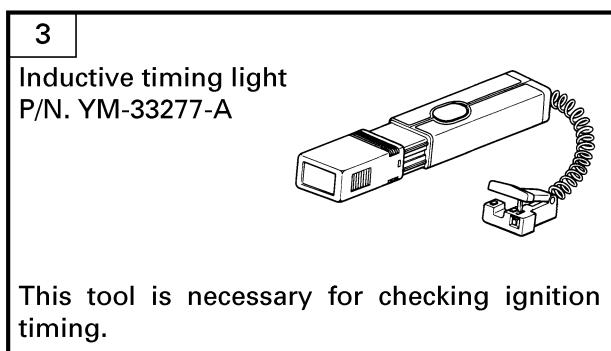

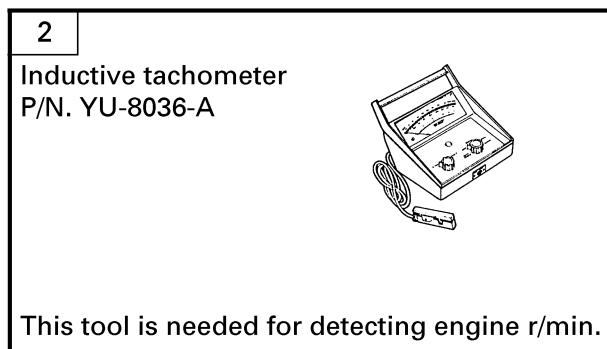

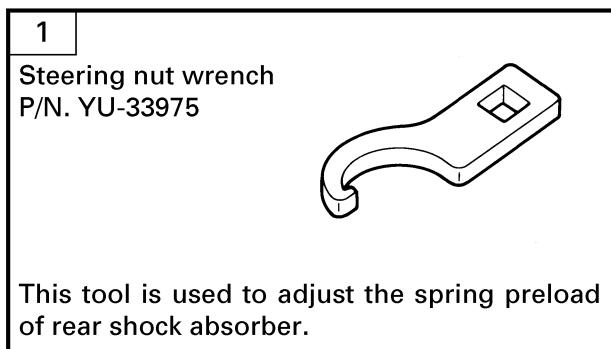

**CIRCLIPS**

1. All circlips should be inspected carefully before reassembly. Always replace piston pin clips after one use. Replace distorted circlips. When installing a circlip (1), make sure that the sharp-edged corner (2) is positioned opposite to the thrust (3) it receives. See the sectional view.

(4) Shaft

**SPECIAL TOOLS**

The proper special tools are necessary for complete and accurate tune-up and assembly. Using the correct special tool will help prevent damage caused by the use of improper tools or improvised techniques.

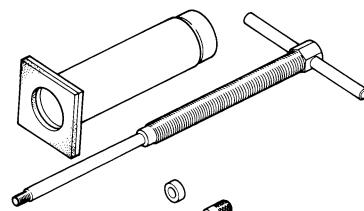

**FOR TUNE UP**

## FOR ENGINE SERVICE

1

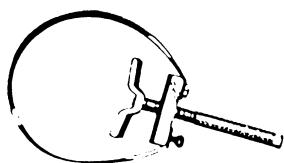

Piston pin puller  
P/N. YU-01304

This tool is used to remove the piston pin.

2

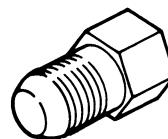

Sheave holder  
P/N. YS-01880

This tool is used to hold the rotor when removing or installing the rotor securing nut.

3

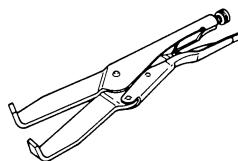

Rotor puller  
P/N. 2K7-85555-00

This tool is used to remove the rotor.

4

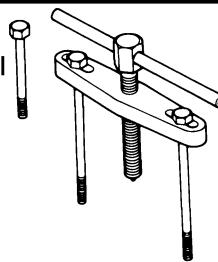

Universal clutch holder  
P/N. YM-91042

This tool is used to hold the clutch when removing or installing the clutch boss locknut.

5

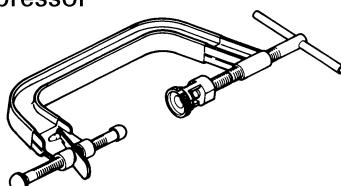

Crankcase separating tool  
P/N. YU-01135-A

This tool is necessary to remove the crank-shaft.

6

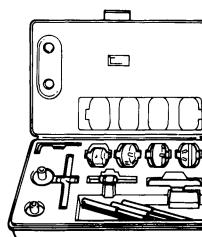

Valve spring compressor  
P/N. YM-04019

This tool is needed to remove and install the valve assemblies.

7

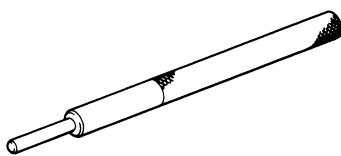

Valve seat cutter set  
P/N. YM-91043

This tool is needed to resurface the valve seat.

8

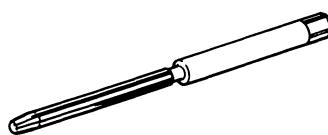

Valve guide remover 5 mm (0.20 in)  
P/N. YM-04097

This tool is used to remove the valve guides.

9

Valve guide reamer 5 mm (0.20 in)  
P/N. YM-04099

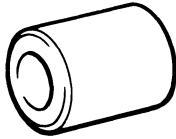

This tool is used to re bore the new valve guide.

10

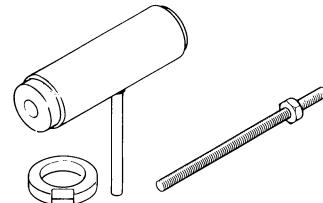

Valve guide installer 5 mm (0.20 in)  
P/N. YM-04098

This tool is needed to install the valve guides properly.

11

Crankshaft installing set  
P/N. YU-90050

These tools are used to install the crankshaft.

12

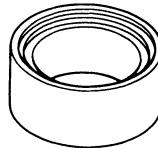

Adapter (M10)  
P/N. YU-90062

This tool is used to install the crankshaft.

13

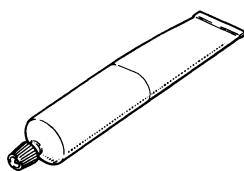

Crank pot spacer  
P/N. YU-01202

This tool is used to install the crankshaft.

14

Quick Gasket®  
P/N. ACC-11001-05-01

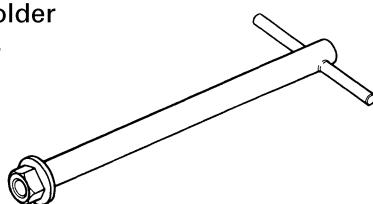

This sealant (bond) is used for crankcase mating surfaces, etc.

## FOR CHASSIS SERVICE

1

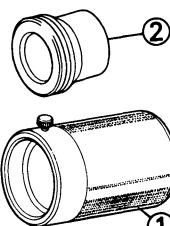

Damper rod holder  
P/N. YM-01418

This tool is used to loosen and tighten the damper rod holding bolt.

2

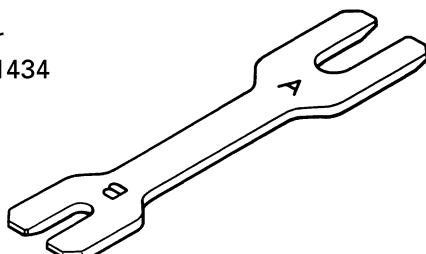

Front fork seal drive weight  
P/N. YM-33963-①  
Adapter 43 mm (1.69 in)  
P/N. YM-8020-②

These tools are used when installing the fork oil seal.

3

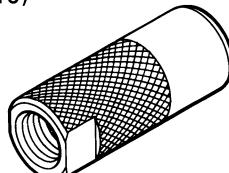

Rod holder  
P/N. YM-01434

This tool is used to hold the fork spring.

4

Rod puller attachment (M10)  
P/N. 90890-01436

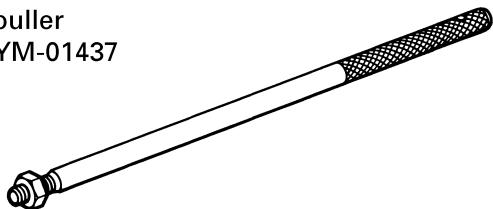

This tool is used to pull up the fork damper rod.

5

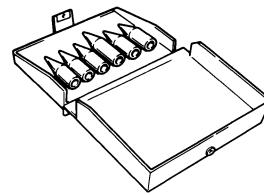

Rod puller  
P/N. YM-01437

This tool is used to pull up the fork damper

6

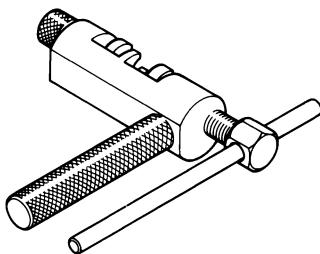

Cylinder cup installer  
P/N. 90890-01996

This tool is used to install the master cylinder kit.

7

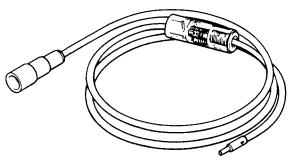

Drive chain cutter  
P/N. YM-33858

This tool is used to cut and join the drive chain.

1

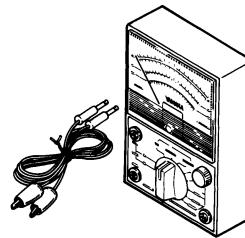

Dynamic spark tester  
P/N. YM-34487

This instrument is necessary for checking the ignition system components.

2

Pocket tester  
P/N. YU-03112

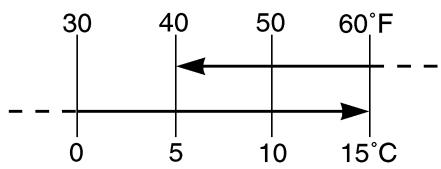

This instrument is used for checking the electrical system.

## FOR ELECTRICAL COMPONENTS

## SPECIFICATIONS

### GENERAL SPECIFICATIONS

Model	TTR250L(C)
Model code:	5GF1 5GF2
Dimensions:	
Overall length	2,095 mm (82.5 in)
Overall width	835 mm (32.9 in)
Overall height	1,260 mm (49.6 in)
Seat height	915 mm (36.0 in)
Wheelbase	1,405 mm (55.3 in)
Minimum ground clearance	305 mm (12.0 in)
Minimum turning radius	2,200 mm (86.6 in)
Basic weight:	
With oil and full fuel tank	124 kg (273 lb)
Engine:	
Engine type	Air-cooled 4-stroke, DOHC
Cylinder arrangement	Forward-inclined single cylinder
Displacement	249 cm <sup>3</sup>
Bore × stroke	73.0 × 59.6 mm (2.87 × 2.35 in)
Compression ratio	10.2 : 1
Compression pressure (STD)	1,200 kPa (12 kg/cm <sup>2</sup> , 174 psi) at 300 r/min
Starting system	Electric starter
Lubrication system	Wet sump
Oil type or grade:	
Engine oil	
	SAE 20W40 type SE motor oil SAE 10W30 type SE motor oil
Oil capacity:	
Engine oil	
Periodic oil change	1.10 L (0.97 Imp qt, 1.16 US qt)
With oil filter replacement	1.20 L (1.06 Imp qt, 1.27 US qt)
Total amount	1.45 L (1.28 Imp qt, 1.53 US qt)
Air filter:	Wet type element
Fuel:	
Type	Unleaded fuel only
Fuel tank capacity	10 L (2.20 Imp gal, 2.64 US gal)
Fuel reserve amount	2 L (0.44 Imp gal, 0.53 US gal)

Amperage rating	100 A
Coil winding resistance	3.9 ~ 4.7 Ω at 20 °C (68 °F)

## GENERAL TORQUE SPECIFICATIONS

This chart specifies torque for standard fasteners with standard I.S.O. pitch threads. Torque specifications for special components or assemblies are included in the applicable sections of this book. To avoid warpage, tighten multi-fastener assemblies in a crisscross fashion, in progressive stages, until full torque is reached. Unless otherwise specified, torque specifications call for clean, dry threads. Components should be at room temperature.

A (Nut)	B (Bolt)	General torque specifications		
		Nm	m • kg	ft • lb

- ⑭ Air vent hose (left)

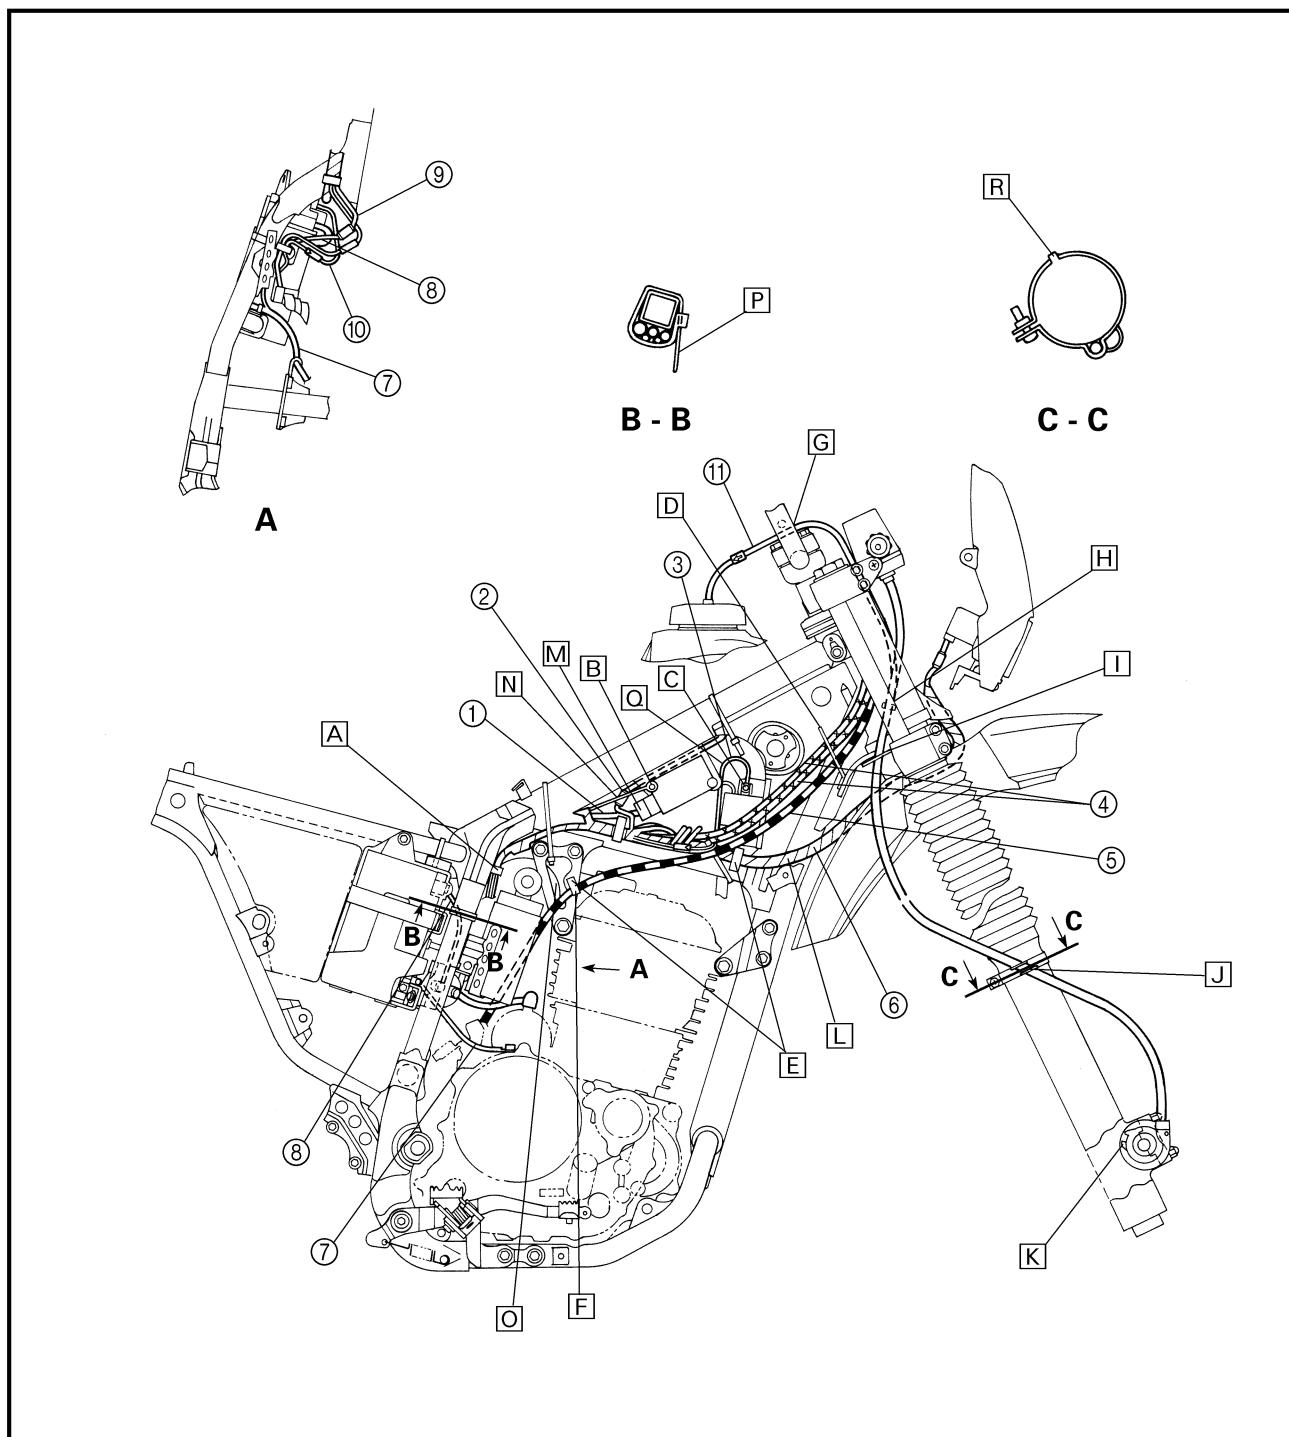

- A** Cut the end of the band after tightening.
- B** Do not put this portion of the harness on the frame after connection.
- C** Install the clamp with its open side facing forward.
- D** Install the band, making sure its end faces backward.
- E** Clamp the front brake hose between its white mark and the slot.
- F** Put the handlebar switch (left) lead on top of the leads.

- G** Pass the spark plug lead over the leads.
- H** Install the clamp with its end facing downward.
- I** Pass the breather hose on the inside of the leads that run side by side, but do not clamp it with a band or other clamping device.

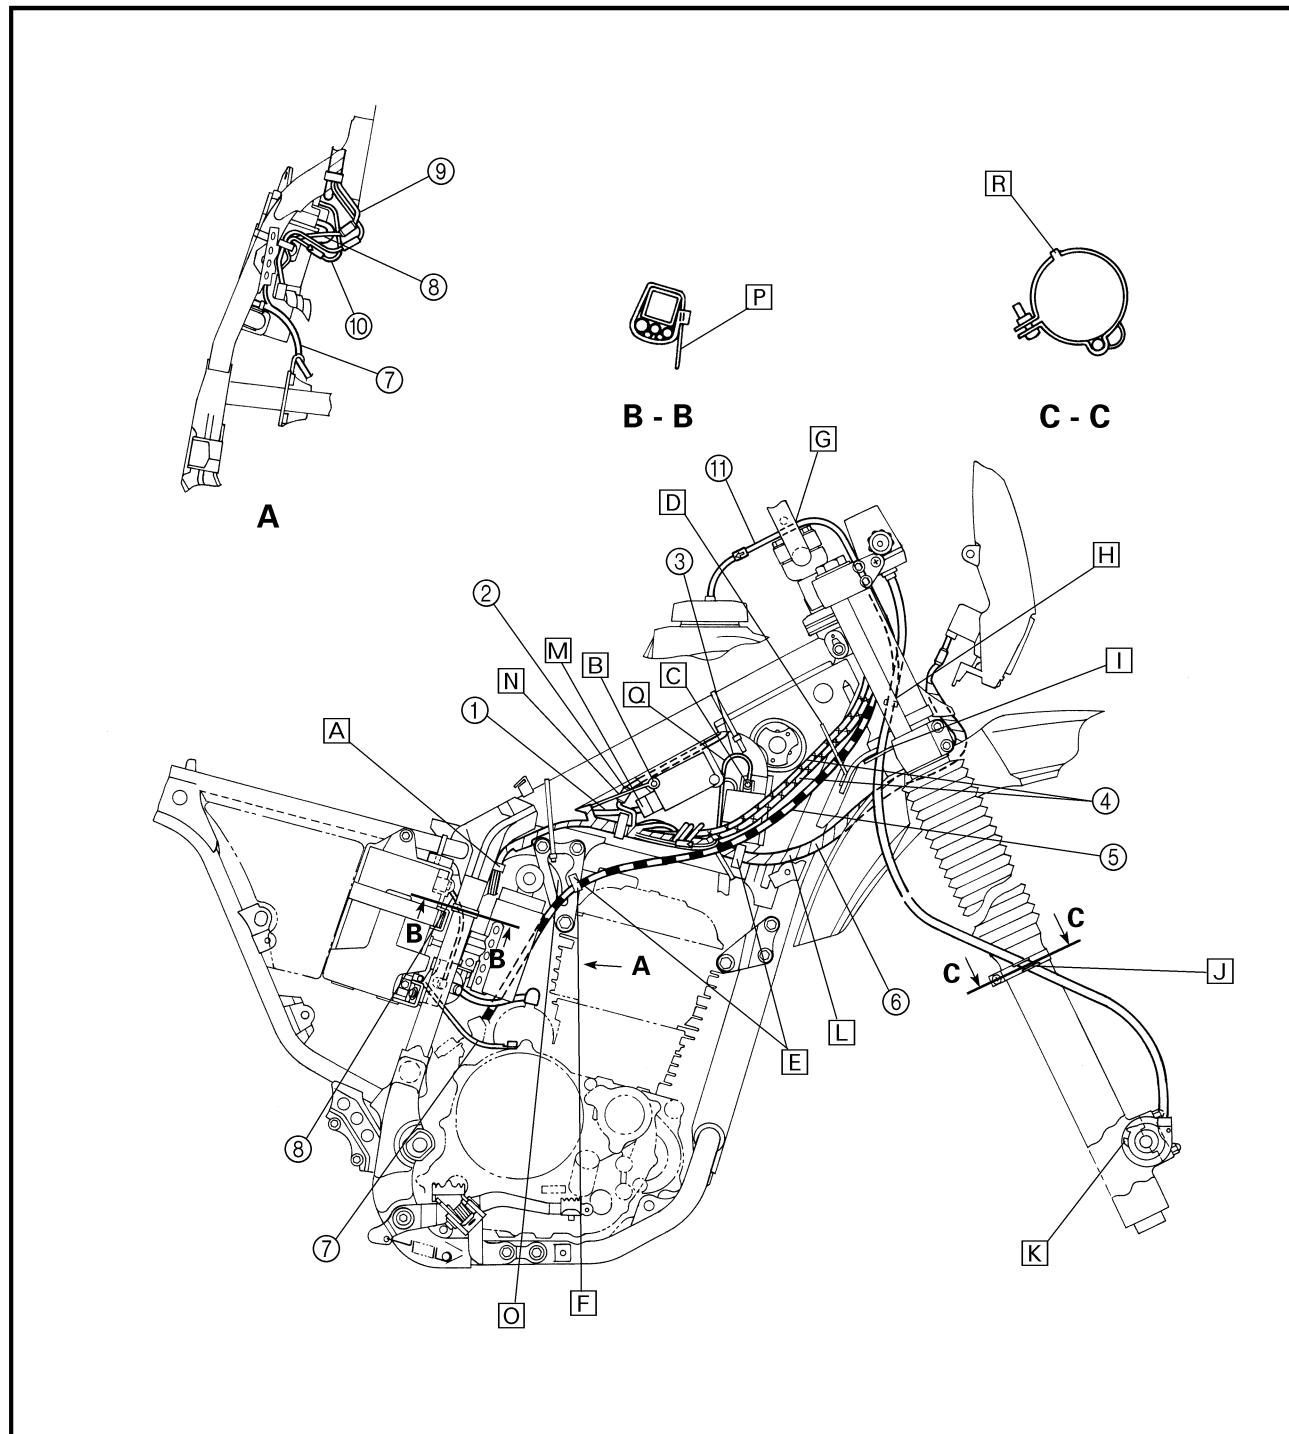

- |                            |  |
|----------------------------|--|
| ① Rectifier/regulator lead | A Install the clamp with its open side facing outward.                           |
| ② Main switch lead         | B Tighten the main switch lead to the rectifier/regulator.                       |
| ③ Ignition coil lead       | C Tighten the ignition coil lead to the ignition coil.                           |
| ④ Throttle cable           | D Pass the throttle cable 1 over the throttle cable 2.                           |
| ⑤ Clutch cable             | E Install the clamp with its open side facing upward.                            |
| ⑥ Wireharness              | F Fasten the clutch cable at the white tape marker with a clamp.                 |
| ⑦ Battery (-) lead         | G Pass the fuel tank breather hose under the handle tension bar.                 |
| ⑧ Battery (+) lead         | H Affix the fuel tank breather hose and speedometer cable to the clamp.          |
| ⑨ Starter relay lead       | I Pass the fuel tank breather hose and speedometer cable through the wire guide. |
| ⑩ Fuse (main) lead         | J Fasten the speedometer cable at the white tape marker with a clamp.            |
| ⑪ Fuel tank breather hose  |  |

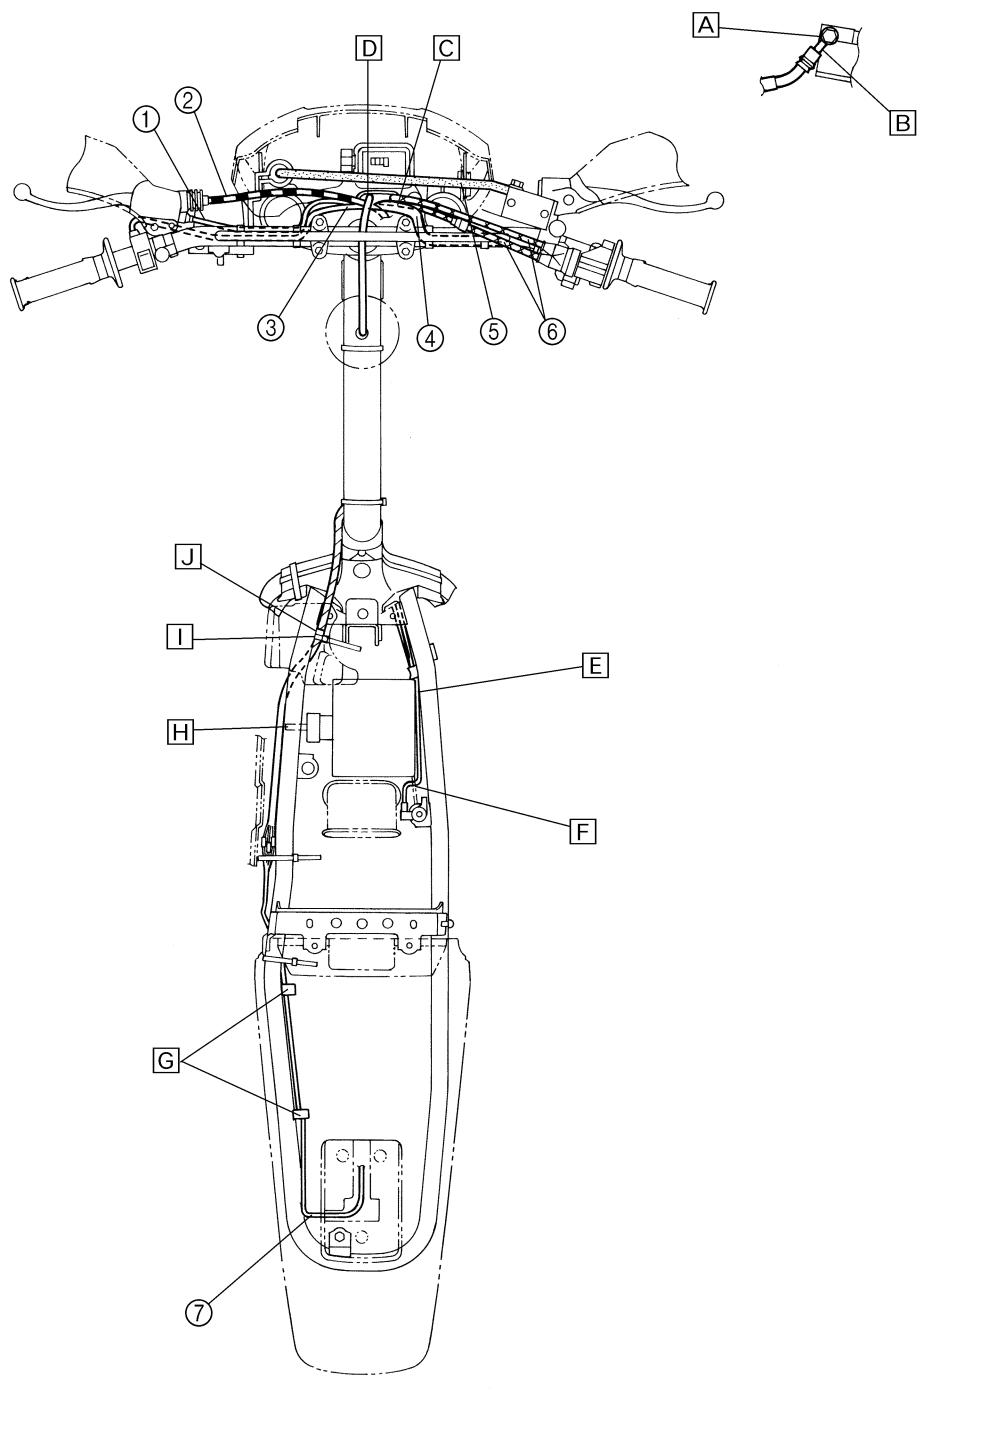

- [K] Make sure the projection on the front fork is placed in the slot in the speedometer gear unit.
- [L] Pass the wireharness over the fuel tank bracket.
- [M] Pass the wireharness under the regulator lead coupler. Make sure the coupler does not go over the right side.
- [N] Insert the coupler on the inside of the ground lead.
- [O] Pass the clamp through the right engine stay.
- [P] Face the band end to the inside of the vehicle.
- [Q] Pass the ignition coil lead on the inside of the throttle cable.
- [R] Align the slot and the projection on the front fork.

- ① Clutch switch lead
- ② Clutch cable
- ③ Handlebar switch (left) lead
- ④ Handlebar switch (right) lead
- ⑤ Front brake hose
- ⑥ Throttle cable
- ⑦ Taillight lead

- A The pipe portion of the brake hose should touch the projection on the master cylinder.
- B Install the brake hose with its white mark facing forward.
- C Pass the throttle cable 1 to the inside of the throttle cable 2.
- D Pass the handlebar switch (right) lead to the front of the clutch cable.
- E Do not allow the air ventilation hose to go over the frame.
- F Pass the air ventilation hose through the guide near the air filter intake.
- G Install the clamp with its open side facing inward.
- H Pass the lead under the frame.
- I Fasten the wireharness to the guide on the frame with a plastic band.
- J Pass the wireharness through the guide.

## PERIODIC INSPECTION AND ADJUSTMENT

### INTRODUCTION

This chapter includes all information necessary to perform recommended inspections and adjustments. These preventive maintenance procedures, if followed, will ensure more reliable vehicle operation and a longer service life. The need for costly overhaul work will be greatly reduced. This information applies to vehicles already in service as well as new vehicles that are being prepared for sale. All service technicians should be familiar with this entire chapter.

### PERIODIC MAINTENANCE/LUBRICATION

	No.	ITEM	CHECKS AND MAINTENANCE JOBS	INITIAL	EVERY	
				100 mi (150 km) or 1 month	600 mi (1,000 km) or 6 months	1,200 mi (2,000 km) or 12 months
<b>Emission Items</b>	1 * Fuel line	Fuel line	<ul style="list-style-type: none"> <li>Check fuel hoses for cracks or damage.</li> <li>Replace if necessary.</li> </ul>		✓	✓

	23 *	Rear shock absorber pivoting point	<ul style="list-style-type: none"> <li>Check operation.</li> <li>Lubricate with molybdenum disulfide grease.</li> </ul>			√

\* : Since these items require special tools, data and technical skills, they should be serviced by a Yamaha dealer.

**NOTE:**

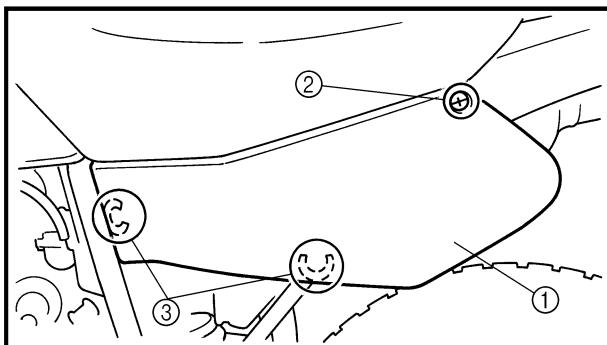

- The air filter needs more frequent service if you are riding in unusually wet or dusty areas.
- Hydraulic brake system
  - When disassembling the master cylinder or caliper cylinder, always replace the brake fluid. Check the brake fluid level regularly and fill as required.
  - Replace the oil seals on the inner parts of the master cylinder and caliper cylinder every two years.
  - Replace the brake hoses every four years, or if cracked or damaged.

## SEAT, FUEL TANK AND COVERS REMOVAL

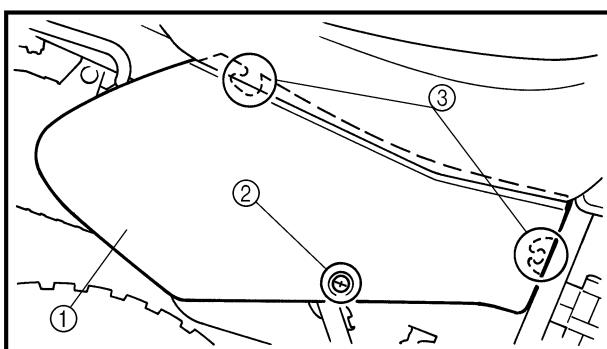

### ⚠ WARNING

Securely support the motorcycle so there is no danger of it falling over.

#### 1. Remove:

- Side cover (left) ①

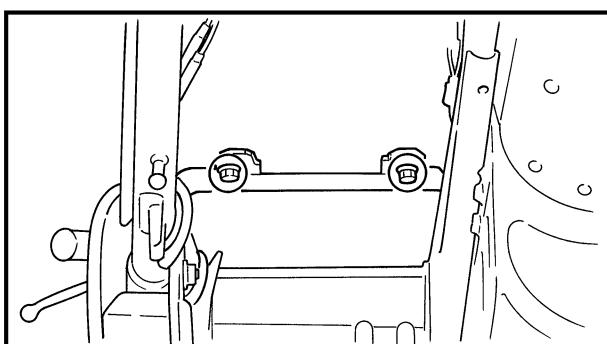

#### 2. Remove:

- Side cover (right) ①

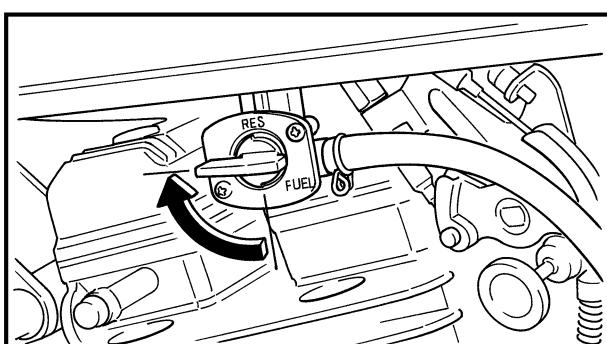

#### NOTE:

When removing the side covers (left and right), remove the bolt ②. Then pull the front and rear portion of the side cover outward to remove the projection ③ from the grommet.

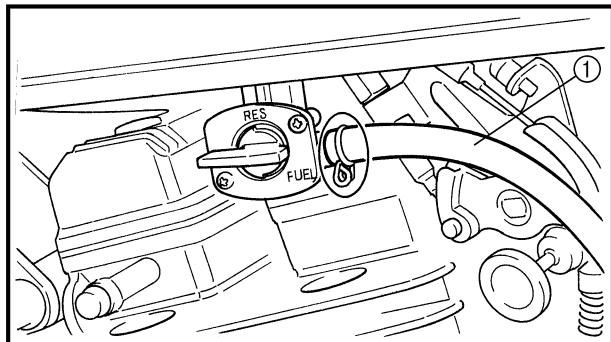

#### 3. Remove:

- Seat

#### 4. Turn the fuel cock to "OFF".

## 5. Disconnect:

- Fuel hose ①

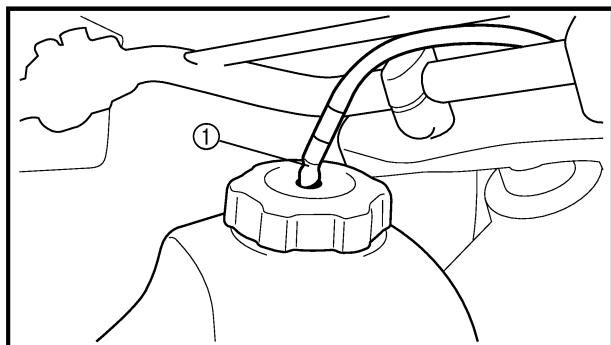

**NOTE:**

Place a rag on the engine to absorb any spill fuel.

**⚠ WARNING**

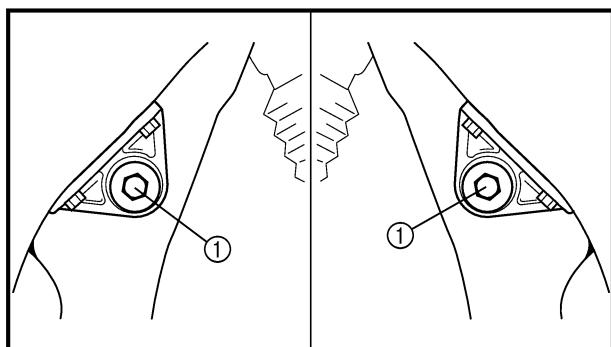

**Gasoline is highly flammable.**

**Avoid spilling fuel on the hot engine.**

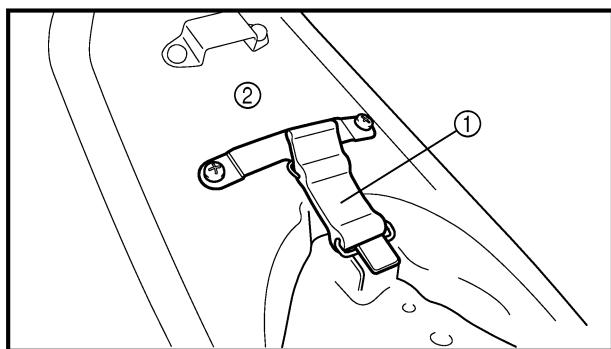

## 6. Disconnect:

- Fuel tank breather hose ①

## 7. Remove:

- Fuel tank bracket bolts ①

## 8. Remove:

- Band ②
- Fuel tank ②

**INSTALLATION**

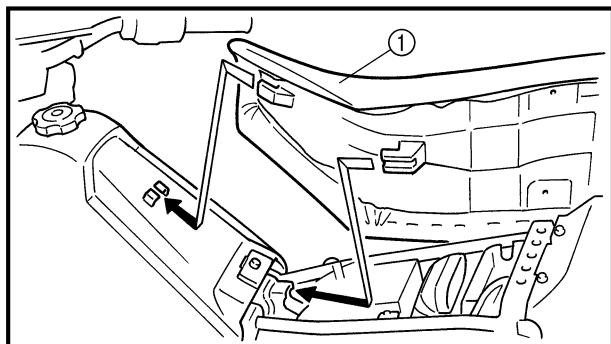

Reverse the "REMOVAL" procedure. Note the following points.

## 1. Install:

- Fuel tank

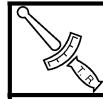

**Bolts (fuel tank bracket):**  
**10 Nm (1.0 m • kg, 7.2 ft • lb)**

## 2. Install:

- Seat ①
- Side covers (left and right)

**Bolt (seat):**

7 Nm (0.7 m • kg, 5.1 ft • lb)

**Bolt (side cover):**

7 Nm (0.7 m • kg, 5.1 ft • lb)

**ENGINE****VALVE CLEARANCE ADJUSTMENT****NOTE:**

- The valve clearance must be adjusted when the engine is cool to the touch.
- Adjust the valve clearance when the piston is at the Top Dead Center (T.D.C.) on compression stroke.

**⚠ WARNING**

**Securely support the motorcycle so there is no danger of it falling over.**

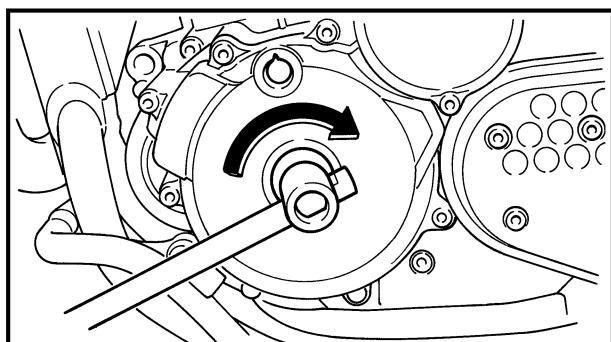

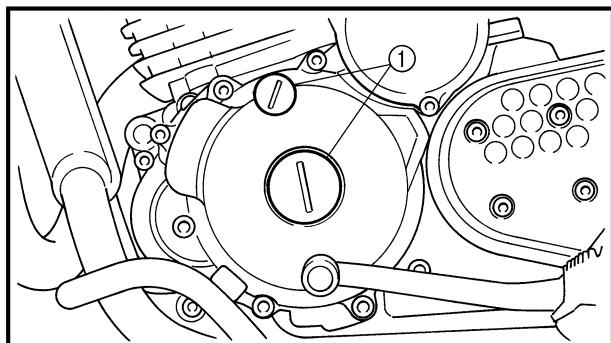

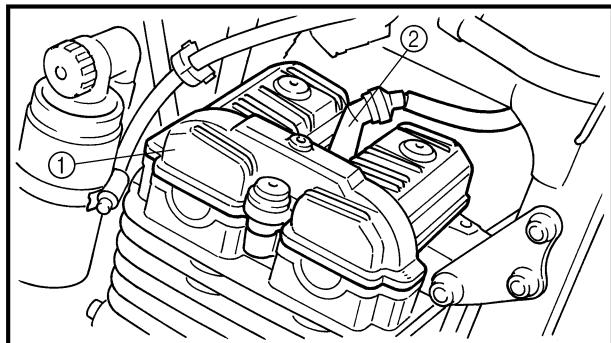

**1.Remove:**

- Side covers
- Seat
- Fuel tank

Refer to "SEAT, FUEL TANK AND COVERS".

**2.Remove:**

- Cylinder head cover ①
- Spark plug ②

**3.Remove:**

- Plugs ① (with O-ring)

**4.Align:**

- "T" mark on the rotor  
With the stationary pointer on the crankcase cover.

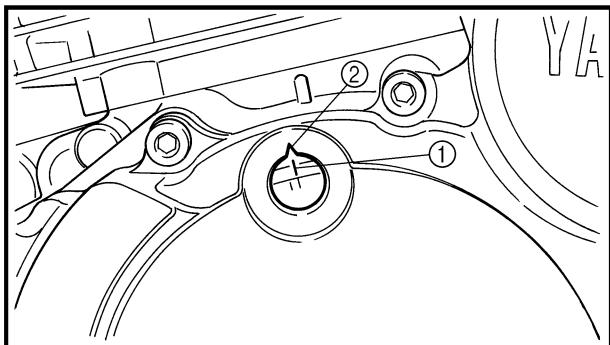

\*\*\*\*\*

**T.D.C. alignment steps:**

- Turn the crankshaft clockwise with a wrench.

# VALVE CLEARANCE ADJUSTMENT

**CHK  
ADJ**

- Align the "T" mark ① on the rotor with stationary pointer ② on the crankcase cover. When the "T" mark is aligned with the stationary pointer, the piston is at Top Dead Center (T.D.C.).

**NOTE:** \_\_\_\_\_

T.D.C. on compression stroke check:

- Both cam lobes must have a valve clearance when the rotor match mark ① is aligned with the stationary pointer match mark ②.
- If not, give the crankshaft one counter-clockwise turn to meet above condition.

\*\*\*\*\*

## 5.Check:

- Valve clearance

Measure the valve clearance using a feeler gauge.

Out of specification → Adjust.

### Valve clearance (cold):

#### Intake:

0.09 ~ 0.19 mm  
(0.004 ~ 0.007 in)

#### Exhaust:

0.19 ~ 0.27 mm  
(0.007 ~ 0.011 in)

\*\*\*\*\*

## Checking steps:

**NOTE:** \_\_\_\_\_

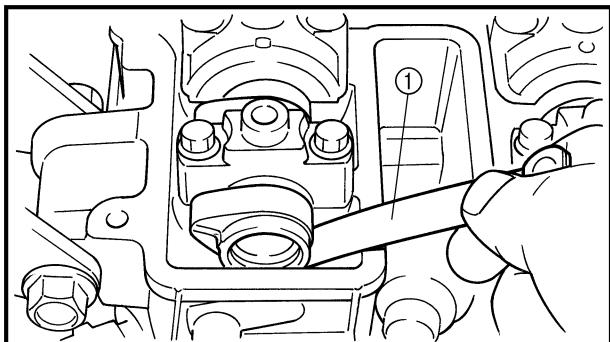

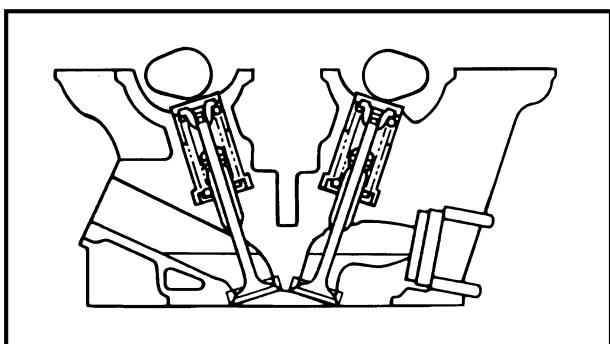

TDC on compression stroke can be found when the cam lobes are opposite each other as shown.

- Measure the valve clearance using a feeler gauge ①.

**NOTE:** \_\_\_\_\_

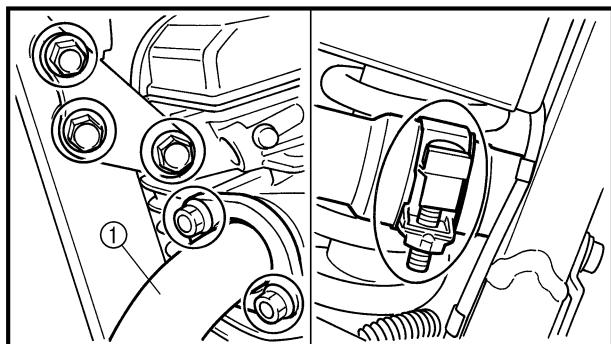

Record the measured reading if the clearance is incorrect.

\*\*\*\*\*

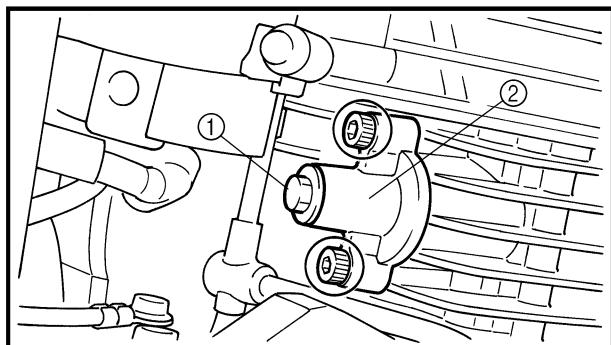

# VALVE CLEARANCE ADJUSTMENT

CHK  
ADJ

6.Remove:

- Exhaust pipe ①

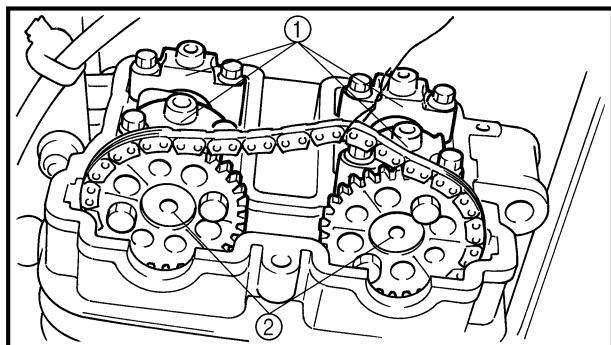

7.Loose:

- Cap bolt ①

8.Remove:

- Cam chain tensioner ②

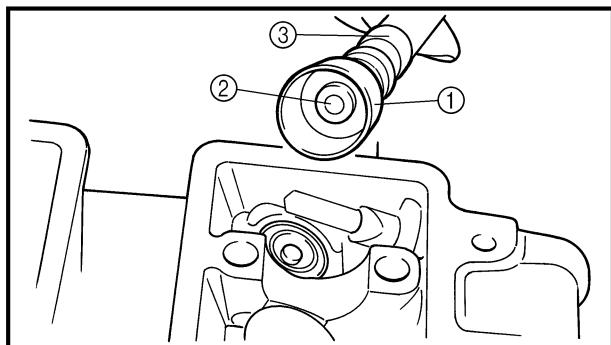

9.Remove:

- Camshaft caps ①
- Camshafts ②

**NOTE:** \_\_\_\_\_

- Refer to "ENGINE DISASSEMBLY-CYLINDER HEAD, CAMSHAFTS, CYLINDER AND PISTON" in CHAPTER 4.
- Fasten a wire to the cam chain to prevent it from falling into the crankcase.

10.Adjust:

- Valve clearance

\*\*\*\*\*

**Adjustment steps:**

- Remove the valve lifter ① and pad ② using the valve lapper ③.

**NOTE:** \_\_\_\_\_

- Place a piece of rag in the cam chain room to prevent the pad from falling into the crankcase.
- Remove the rag after adjustment.

- Select the proper valve adjusting pad from the following chart.

# VALVE CLEARANCE ADJUSTMENT

**CHK  
ADJ**

### VALVE CLEARANCE (cold):

0.19 ~ 0.27 mm (0.007 ~ 0.011 in)

Example: Installed is: 180

Measured clearance is:

0.34 mm (0.013 in)

Replace 180 pad with 185 pad

# VALVE CLEARANCE ADJUSTMENT

**CHK  
ADJ**

Pad range		Pad availability: 25 increments
No. 120 ~ No. 240	1.20 mm (0.047 in) ~ 2.40 mm (0.094 in)	Pads are stepped in 0.05 mm (0.002 in) increments

**NOTE:** \_\_\_\_\_  
Thickness of each pad is marked on the pad face that contacts the valve lifter (not the cam).

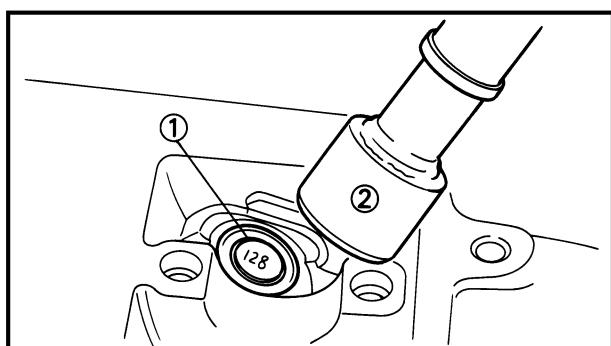

- Round off the hundredths digit of the original pad number to the nearest 0.05 mm increment.

Last digit of pad number	Rounded value
0 or 2	0
5	(NOT ROUNDED OFF)
8	10

**EXAMPLE:**  
Original pad number = 178 (1.78 mm)  
Rounded off digit = 180

**NOTE:** \_\_\_\_\_  
Pads can only be selected in 0.05 mm (0.002 in) increments.

- Locate the previously installed pad number on the chart. Locate the measured valve clearance on the chart. The point where these coordinates intersect is the new pad number.
- Install the new pad ① and valve lifter ②.
- Recheck the valve clearance and adjust it if necessary.

**NOTE:** \_\_\_\_\_  

- Apply molybdenum disulfide grease to the pad.
- Use your finger to rotate the valve lifter smoothly.

\*\*\*\*\*
